

EMPLOYMENT HISTORY

Digital Crafts, Atlanta, GA

February 2016 - June 2016

Full Stack Web Development Student

- Developer in 16 week, 680-hour, full stack web development immersive course
- Curriculum covered latest front and back end technologies partnered with best practice techniques
- Daily procedure included app development, efficient code design, and key principles such as version control, continuous integration, design patterns, and analytical thinking
- Heavy emphasis placed on Javascript as well as Javascript frameworks (jQuery & Angular.js)
- Learning to leverage the power of the online developer community to overcome coding challenges and independently grow as a developer

Recent Projects

- [Coffee-Roasters](#) E-commerce site built using the MEAN Stack. Login, registration, & payment functionality using Stripe and passport authentication. Integrated custom API built in Express.js to handle GET and POST requests sent from custom frontend built with Angular.js
- [Movie-Database](#) Application built using CSS, Bootstrap, Bootstrap Modals, jQuery, TypeAhead, and Isotope plugins. Uses jQuery's .getJSON method to pull from an endpoint provided by themoviedb.org and serves movies currently playing movies on load. Gives the option of searching for a movie, actor, actress, or tv-show and updates the HTML to reflect the new posters with sorting options via the Isotope plugin
- [Interactive-Portfolio](#) Created personal portfolio website utilizing HTML, CSS, JavaScript, jQuery, Bootstrap, PHP, and Sass. Applied user experience knowledge by creating a clean minimalistic page incorporating different development techniques showcasing recent web application projects
